

Specialized Solutions | COVID-19 Response

# COVID+ PROTECT

Best in class converged security & information management designed to address the challenges of a rapidly changing world.

## How is your organization preparing to face the “new normal?”

The effects of the COVID-19 Coronavirus pandemic have been both widespread and unprecedented, impacting nearly every facet of everyday life, across the globe. But as we begin to return to public and private spaces, it's become apparent that a “new” normal has emerged. To ensure best-in-class protection of people and assets, organizations must be prepared to completely rethink the way they address operational security and risk management challenges in this new environment.

### security challenges

- Maintaining social distancing guidelines and mask-wearing policies
- Body temperature monitoring for people entering controlled spaces
- Maintaining capacity limits for controlled spaces
- Contact tracing of potential cases and carriers
- Monitoring remote work network vulnerabilities
- Managing facility disinfection routines

# vidsys solution

Vidsys' COVID Protect solution is designed to help organizations continue to ensure public health, safety and security while facilitating the on-going transition back to normalcy.

We've adapted our Converged Security and Information Management (CSIM) solution to support COVID-focused risk monitoring, alerting, and situation response capabilities through our Vidsys Enterprise software platform. COVID PROTECT helps security stakeholders achieve a more complete situational awareness picture across even the most widely dispersed enterprises.

COVID PROTECT allows users to gain actionable security insights that are tailored to each organization's unique COVID-19 focused policies, procedures and compliance requirements. The solution can be rapidly deployed via our browser-based and native mobile applications, making it ideal for providing real-time situational awareness to both remote users and first responders any place, anytime.

## holistic risk management

- Provides situational awareness and visualization capabilities
- Intelligently manages and automates workflows
- Enables remote operations and mobile situational awareness
- Supports organizational resilience and business continuity efforts
- Facilitates situation management across multiple, disparate sites

### 01. PREPARE

COVID-focused integrations for Vidsys collect and analyze data from multiple, disparate sources across your organization to provide full, real-time situational awareness via a single, unified platform.

### 02. DETECT

Vidsys' COVID PROTECT integrations are specifically designed to detect and surface COVID-related behaviors, activities and alerts that are tailored to each organizations' unique environment.

### 03. RESPOND

COVID PROTECT allows operators to respond quickly to manage your pandemic-related situations in real-time, reducing the risk of virus spread within your organization.

### 04. RECOVER

COVID PROTECT provides actionable data to facilitate and support organizational resilience, business continuity and crisis management plans, helping organizations maintain critical operations and reduce the risk of disruption amid a rapidly shifting business environment.
